merz DENTAL

Digital Denture - 100 % your way

THE NEW

BDCreator® PLUS

▶ One software
▶ All indications
▶ Unlimited possibilities

From tray to data

Fast • Simple • Reliable

The preparation of information for the digital denture is achievable in many ways. Integrate the existing processes of your customers into your digital workflow.

Reline impression
from old to new – quick impression with the old denture

Conventional impression
Simply use existing structures and processes

^{BD}KEY® impression
High process reliability through predictable results

Digitisation of information

Depending on the indication, the dentist can also supply an intraoral scan.

For everyone,

who wants MORE...

Work preparation for precise information

- Digital production of functional trays, bite registrations or pin-point registrations
- Use unprecedented transparency in the construction for precise digital manufacturing
- Increase the efficiency and reliability of your processes

ᴮᴰCreator® *PLUS*

➤ **One software**
- All applications for removable full dentures in one software
- No interruption of the workflow by third-party software
- Including analyses, cutting functions and hole closures

➤ **All indications**
- Full dentures of all Angle classes (I-III)
- Unimaxillary (single) dentures
- Overdenture via attachment
- Full immediate and interim dentures

➤ **Unlimited possibilities**

Use all the flexibility you have when it comes to setting-up and selecting manufacturing processes and materials. The ᴮᴰ**Creator®** *PLUS* offers ready-to-use setups based on the Polystar® Selection EDITION anterior tooth and the DeltaFormr® posterior tooth.

The software guides you through the entire design and selection process, which can be done in a number of ways:

Rows of teeth set in the ᴮᴰ**Load®**

Integrated occlusion concept and individual positioning of anteriors in the ᴮᴰ**Load® XP**

Positioning of individual teeth or groups of teeth in the **FileSplit** procedure*

EFFICIENCY ◀ ▶ INDIVIDUALITY

*The add-on artegral® life PreSets offers further options based on the fully anatomical artegral® life anterior and posterior teeth.

➕ **CAD Add-On** artegral® Life **PreSets**
for maximum individuality and aesthetics

- Additional 120 digital PreSets of the fully anatomical artegral life® in lingualised occlusion
- Brilliance, aesthetics and naturalness – combine the outstanding features of the artegral® life with your digital manufacturing process
- Digital repositioning per tooth or tooth group, individually or synchronously, in axis and spatial direction
- Adaptable to Angle classes I - III

25° cusp inclination

Digital Denture 100 % - your way

The ^{BD}**Creator® *PLUS*** is an open system. You are therefore completely free in the choice of the production method, your CAM or slicing software.

PRINT

- Work preparation:
  functional trays, bite registrations,
  pin-point registrations

- Try-In individualised

- Denture base and tooth arch
  for temporary use

MILL

- ^{BD}Load® TS: Try-In

- ^{BD}Load®: With integrated
  occlusion concept

- ^{BD}Load® XP: With integrated
  posteriors in occlusion for
  individualisation with anteriors.

- Denture base + tooth

✚ Benefits ^{BD}Load®

- lingualized occlusion
- highly cross linked base material
- one time milling process
- prefabricated tooth setup
- low content of monomer - less than 1 %
- no need to stick
  no need to glue

- size: S, M, L
- arch width: narrow, medium, wide
- setup teeth: 6-6 + 7-7
  optional customisation with anterior teeth
- tooth shades: A1 - D4, BL1 - BL4
- denture base: pink + dark pink
- teeth: 4-layer anteriors / 3-layer posteriors
  1-layer anteriors / posteriors (ECO)

100 % your way

Take your full denture workflow to the next level with the **BDCreator® PLUS** and integrate digitally supported processes into existing processes according to your needs.

▶ **One software**
With the **BDCreator® PLUS** you get all the applications you need for digital full dentures.

▶ **All indications**
Make full dentures for all Angle classes in your digital workflow.
▶ **Unlimited possibilities**
Decide freely between efficiency, individuality or aesthetics. Simply use the **BDCreator® PLUS** in your existing workflow. Get started with the production of work preparation.

BDCreator® PLUS
for all indications of full dentures

- Full dentures of all Angle classes (I-III)
- Unimaxillary (single) dentures
- Overdenture via attachment
- Full immediate and interim dentures

100 % for our patients

ᴮᴰCreator® *PLUS*

Basic Software

- Full dentures for all Angle classes (I-III)
- All applications in one software incl. fully adjustable virtual articulator
- Efficient design in the ᴮᴰLoad® or individuality through digital repositioning of teeth rows or individual teeth
- Open production: Printing or milling in the ᴮᴰLoad®, ᴮᴰLoad® XP, via FileSplit tooth arch and base or pockets
- Dynamic occlusal correction
- Design of work preparation: Individual trays, individual bite registrations, pin-point registrations (gnathometer)

Test before invest

We demonstrate the design process in the ᴮᴰCreator® *PLUS* using one of your cases and take over the milling service.

MERZ DENTAL – dental technology and digital competence

We have concentrated our decades of experience in prosthetics and the development of teeth in the Baltic Denture System and are a leading innovator in the manufacturing of digital full dentures. Our philosophy of full dentures, based on Prof. Dr. Gerber and TiF, which have already been implemented in 3 arch widths in the ᴮᴰLoad®, have now also been transferred to 120 artegral® life PreSets.

We accompany you along the entire path of your digital denture workflow with innovative materials and our expertise bundled in the ᴮᴰCreator® *PLUS*. Traditional knowledge is implemented intuitively in the software with simple, logical design steps.
